

Ribcage tension

The client complained of difficulty taking a deep breath.

Look at the area **under the ribcage** red arrow. Do you see the raised area? This is in the middle of the treatment after one side is free

After treatment of the whole ribcage area. The restriction is released. Cause: client tripped and fell.

Doesn't it look like inflammation or fat adipose tissue? It's not fat.

It was congested lymph and restricting connective tissue and inflammation. The treatment was lymph drainage therapy combined with deep myofascial release at

Maybe your abs are inflamed/congested, not fat!
